

CO-Gas Safety's summary of statistics on deaths and injuries

UK deaths caused by unintentional Carbon Monoxide (CO) poisoning*

(Between 1 Sept 1995 - 31 Aug 2021): **Total: 724**

*CO-Gas Safety collect information on unintentional poisoning caused by the CO that is produced by any and all fuels used in appliances that work via combustion (burning). We do not include deaths or injuries from CO that is produced by unintentional fire or flames (often smoke inhalation in domestic fire accidents). The incidents that we document are those where a fire or appliance involving combustion was intentionally used, but the resulting CO poisoning was not expected and was avoidable. Please see www.co-gassafety.co.uk/data-menu/ for more details.

Notes: Zane Gbangbola, aged 7, died in February 2014. The Coroner's verdict in September 2016 was that Zane died of carbon monoxide poisoning. However, the blood test found only 8% carboxyhaemoglobin and we have never heard of a death of an otherwise healthy person dying at such a low level. The family disputes the finding and continues to maintain that Zane died of hydrogen cyanide from a flood from a landfill site, so we have not included this death. see <http://www.dailymail.co.uk/news/article-3794537/Justice-Zane-New-hope-parents-blamed-death-flood-tragedy-son-MP-attacks-seriously-flawed-inquest.html>
